

Manuscript Title

Author Name

Abstract—
Insert abstract text here.

I. PACKAGE OPTIONS

- `\usepackage{l16cn}`: default
- `\usepackage[hidegraphics]{l16cn}`: graphics (pictures, tikz figures, pdfs won't be loaded).
- `\usepackage[draft]{l16cn}`: add "Confidential" watermark

II. FILE STRUCTURE

- Main file: `journal_main.tex`
- Sub-files:
 - Abstract: `abstract.tex`
 - Glossary: `definitions.tex`
 - Bibliography: `references.bib`
 - Main text: `text.tex`

III. NOTATION

`definitions.tex` contains all the definitions, acronyms, and notations. Use `\gls{ }` for repeated glossary, acronym, and notation items, e.g., use `\gls{abm}` for the first time, you get "agent-based model (ABM)." Use it again, you get "ABM." Similarly, you can use it on glossary items (e.g., use `\glspl{al}` for plural "artificial lives") and mathematical notations (e.g., use `\gls{state}` or $\$ \gls{state} \$$ for x).

IV. MULTI-LINE EQUATION

Proper way to handle multi-line equations:

```
\begin{equation}
\begin{aligned}
x(t+1) &= Ax(t) + Bu(t) + \omega(t), \end{aligned}
\end{equation}
```

Author Info

```
y(t) &= Cx(t) + Du(t) + \nu(t) .
\end{aligned}
\end{equation}
```

See output:

$$\begin{aligned} x(t+1) &= Ax(t) + Bu(t) + \omega(t), \\ y(t) &= Cx(t) + Du(t) + \nu(t). \end{aligned} \quad (1)$$

V. CITATION

`references.bib` contains all the references. Use `\cite{ }` for journal and `\citep{ }` for book. For instance, `\cite{galton1907vox}` would return a numbered citation like this: [1]. Numbered citations should be good for most journals.

VI. ROOT

Insert the following at the beginning of every sub-file (replace `<main file name>`) with the main file name you use:

```
% !TEX root = <main file name>.tex
```

For instance, if your main file is `journal_main.tex`, write the following at the first line of every sub-file:

```
% !TEX root = journal_main.tex
```
